## UBS ETF - Bloomberg Barclays USD Emerging Markets Sovereign UCITS ETF, class (USD) A-acc (ISIN: LU1324517454)

a sub-fund of UBS ETF SICAV

This fund is managed by UBS Fund Management (Luxembourg) S.A., a part of UBS AG.

### Objectives and investment policy

The UBS ETF - Bloomberg Barclays USD Emerging Markets Sovereign UCITS ETF sub-fund will take proportionate exposure on the components of the Barclays Emerging Markets USD Sovereign & Agency 3% Country Capped Index (Total Return) either through direct investments in all or substantially all of the component securities and/or through the use of derivatives in particular where it may not be possible or practicable to replicate the index through direct investments or in order to generate efficiencies in gaining exposure to the index. Exposure to the index through direct replication may be affected by rebalancing costs, while exposure to the index through derivatives may be affected by derivative trading costs. The use of OTC derivatives further engenders counterparty risk which is however mitigated by UBS ETF SICAV's collateral policy.

- The sub-fund will invest its net assets predominantly in bonds, transferable securities, money market instruments, units of undertakings for collective investment, deposits with credit institutions, structured notes listed or dealt in on a regulated market and other assets eligible under the prospectus.
- Currency hedged share classes may also be available in the sub-fund.

Investors other than Authorized Participants may not subscribe shares directly with the UBS ETF SICAV, but may purchase and sell shares, through an intermediary, on one of the stock exchanges

listed for the share class on the website [www.ubs.com/etf](http://www.ubs.com/etf). Direct redemptions with the UBS ETF SICAV are however possible on each business day in Luxembourg. Authorized Participants may subscribe and redeem shares with the UBS ETF SICAV under the conditions detailed in the relevant Authorized Participant Agreement.

Fund income is not paid out, but instead will be reinvested.

### Risk and reward profile

#### More about the risk category

- The risk category is based on the estimated future volatility of the fund. The method used for this estimate depends on the fund type and historical data.
- Historical performance is not a reliable indicator for future performance.
- The risk category allocated is not static and may vary over time.
- Allocation to the lowest risk category does not mean that an investment in this fund is free of risk.

#### Why is this fund in this Category?

The fund is in risk category 3 because the volatility of its returns is low.

The fund invests in bonds and may therefore be subject to volatility. This requires corresponding risk tolerance and capacity. The value of a unit may fall below the purchase price. Changes in interest rates have an effect on the value of the portfolio.

#### Further material risks

- Investment in fixed income securities are usually considered as carrying credit risk (i.e. potential loss due to failure of issuer).
- The fund may use derivatives which can reduce investor risks or give rise to market risks as well as potential loss due to failure of counterparty.
- Investment grade bonds are usually considered as carrying low to medium credit risk (i.e. potential loss due to failure of issuer).
- Pronounced fluctuations in price are characteristic of emerging economies. Other characteristics include specific risks such as lower market transparency, regulatory hurdles, illiquidity of markets as well as political and social challenges.
- Every fund reveals specific risks, a detailed and comprehensive list of risk descriptions can be found in the prospectus.
